

TO WHOM IT MAY CONCERN:

## Declaration

We, **Vedalab**, located in Rue de l'Expansion - ZAT du Londeau, B.P. 181, 61006 ALENÇON CEDEX - FRANCE, are the manufacturer of the COVID-19-Check-1 antigen test which detects the N-protein of the SARS-COV2 virus.

Most of the mutations of the SARS-COV2 variants are affecting the S- protein but not the N-protein which is a very preserved internal viral protein. For the Omicron variant, almost all mutations are affecting the S-protein and the very few affecting the N-protein are not located on the epitope site recognized by our antibodies. The Omicron variant will therefore be detected by our COVID-19-Check-1 antigen test equally as all other SARS-COV2 variants.
